

HIMESH SAMPAT LADDHA

Pune, Maharashtra, India

8999114798 | himeshladdha@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Aspiring Software Engineer with advanced proficiency in Data Structures & Algorithms, OOP, Python, and C++, backed by 450+ DSA problems solved. Hands-on experience building AI/ML and full-stack applications, developing APIs, and working with databases through projects and internship experience. Strong analytical and problem-solving skills with experience in AI-assisted development, collaboration, and adapting to new technologies.

Education

Pune Institute of Computer Technology

2023 – 2027

Bachelor of Engineering in Information Technology; CGPA: 9.32

Pune, Maharashtra

Technical Skills

Languages: C++, Java, Python, JavaScript, TypeScript, SQL

Core Computer Science: Data Structures & Algorithms, Object Oriented Programming, Database Management Systems, Computer Networks, Operating Systems, Software Design.

System Design: Microservices architecture, Asynchronous task processing (Celery/RabbitMQ), containerization, distributed caching

Backend: Node.js, Express.js, FastAPI, REST APIs, Socket.io

Frontend: React.js, Next.js, Three.js, React Three Fiber, TailwindCSS, HTML5, CSS3

Databases & Tools: MongoDB, MySQL, Git, GitHub, Clerk, Cloudinary, Postman

AI / ML: XGBoost, Scikit-learn, RDKit, LLM Orchestration, RAG, Gemini API, Computer Vision, NLP

Projects

TruthLens (Hackathon Winner) | Python, FastAPI, Multi-LLM, Redis, MongoDB

Mar 2026

- Led team AIMatrix to 1st place** at the Josh Software 24-hour Hackathon; architected a 5-layer RAG-based verification pipeline - claim extraction, Wikipedia/SerpAPI evidence retrieval, multi-provider LLM judging (Gemini, OpenAI, Groq, Grok, Anthropic), risk attribution, and 0-100 hazard scoring - at 93%+ accuracy across 50+ real-time claims.
- Built production infrastructure - 4-tier Redis caching (sub-5ms hits), JWT auth, async MongoDB logging - plus a Chrome Extension and Chart.js dashboard; as team lead, designed and authored an automated testing suite of 144 tests (0 failures) and contributed ~8,400 lines, owning pipeline design and scoring refinement.

TalentMatch AI – Recruitment Intelligence Platform | Python, FastAPI, Next.js, MongoDB, Qdrant

Apr 2026

- Engineered a full-stack, production-grade talent intelligence platform for the Redrob AI: India Runs Data & AI Challenge - a Next.js/TypeScript frontend over a FastAPI microservices backend with Celery/RabbitMQ async processing and Redis caching - ranking 100,000+ unstandardized candidate records in under 60 seconds on CPU.
- Designed a heuristic scoring algorithm (experience-envelope targeting, anti-honeypot signal multiplier) achieving 0% honeypot presence, backed by an MD5-fingerprinted cache (<5ms) and a Qdrant retrieval layer fusing dense/sparse vector search via RRF (k=60) with LLM-generated competency gap analysis.

ToxScan AI – Interpretable Drug Toxicity Prediction | Python, XGBoost, SHAP, RDKit

Feb 2026

- As team lead and ML engineer, architected a Multi-Task XGBoost model across 12 Tox21 biological pathways over a 2,058-dimensional feature space, achieving 0.8175 mean AUC-ROC with sub-15ms CPU-only inference for real-time use.
- Architected the training pipeline and masked evaluation strategy for ~16% label sparsity, and integrated a custom SHAP-to-atom mapping pipeline rendering toxicophore visualizations that highlight exact toxic substructures - replacing an opaque risk score with interpretable output.

Work Experience

The Design Trip

July 2025 – Dec 2025

Frontend Developer Intern

Remote – Pune

- Designed a component-driven architecture to deliver 20% of a production government-scale web application (Protean) serving 50,000+ users, using Next.js and TypeScript with WCAG-compliant, enterprise-standard components; owned the API integration layer across 2 concurrent client projects in an Agile environment, maintaining zero breaking changes across 3+ sprint cycles.
- Engineered 50% of the animation system and 30% of the UI for a second client (JWGlobe) using Three.js and React Three Fiber, implementing physics-based mathematical transformations for a 3D visualization framework sustaining 60fps under complex scene loads.

Achievements & Certifications

Hackathon: 1st Place, Josh Software 24-Hour Hackathon (2026) - Built TruthLens, an LLM hallucination detection system achieving 93%+ verification accuracy.

DSA: Solved 450+ Data Structures and Algorithms problems across LeetCode and other platforms using C++.

Olympiads: 2× Gold Medal, International Mathematics Olympiad (IMO) · Medal, International Science Olympiad (ISO).

Certifications: Web Development Program, IIT Bombay · Machine Learning Certification, NIT Durgapur.
