

HIMESH SAMPAT LADDHA

Pune, Maharashtra, India

📞 8999114798 ✉ himeshladdha@gmail.com [in](#) [Linkedin](#) [G](#) [Github](#) [🌐](#) [portfolio](#)

Summary

Full Stack Developer and IT undergraduate at PICT with experience building scalable MERN and AI powered applications. Skilled in React.js, Next.js, Node.js, and TypeScript with internship experience developing enterprise grade web applications and interactive user experiences.

Education

Pune Institute of Computer Technology

2023 – 2027

Bachelor of Engineering in Information Technology; CGPA: 9.18

Pune, Maharashtra

Experience

The Design Trip

July 2025 – Dec 2025

Frontend Developer Intern

Remote - Pune

- Engineered 20% of a large scale government web application (Protean) using Next.js and TypeScript, delivering accessible UI components adhering to enterprise level coding standards.
- Developed 50% of the animation logic and 30% of the UI for JWGlobal, implementing complex state management and Three.js/mathematical logic for a high performance, animation intensive experience.
- Optimized frontend performance and system reliability by collaborating in an Agile environment with UI/UX and backend teams to ensure seamless API driven data flow.

Projects

TruthLens (Hackathon Winner) | TypeScript, Python, Gemini API, Chrome API

[GitHub](#)

- Led team AIMatrix to 1st place at the Josh Software 24-hour Hackathon, developing a real time system to detect and score LLM hallucinations across multiple web interfaces.
- Architected a five layer pipeline including an Intercept Layer for DOM monitoring, a Decomposition Layer using NLP to isolate atomic claims, and a Verification Layer for grounded fact checking.
- Developed an Inference & Risk Attribution engine that utilizes an LLM as-a-judge model to evaluate claim consistency, generating a 0-100 risk score with automated user facing explanations.
- Analyzed 50+ claims in real time and achieved a 93%+ verification accuracy using LLM-based hallucination detection and fact-checking pipelines.

TradeGuard AI - GenAI Contract Analysis Tool | React, Node.js, Gemini API, MongoDB

[GitHub](#)

- Engineered a Generative AI platform using Node.js and Gemini API to automate the summarization of complex legal contracts and parse dense jargon into actionable insights for users.
- Developed a RESTful API to identify hidden charges and unfavorable clauses, generating automated risk assessment reports that detect potential consumer threats and improve legal transparency.

Code Cure - Healthcare Management System | MERN Stack, Socket.io, Cloudinary

[GitHub](#)

- Developed a comprehensive healthcare platform facilitating digital consultations, medical record management, and automated appointment scheduling for improved patient doctor workflows.
- Integrated Socket.io to enable real time messaging and notification systems, ensuring instant communication between healthcare providers and patients during critical care windows.
- Implemented secure document handling using Cloudinary for encrypted medical report storage, ensuring HIPAA-compliant data management and high availability.

Relevant Coursework

- Data Structures & Algorithms
- Object Oriented Programming
- Database Management Systems

Technical Skills

Languages: C++, Python, JavaScript, TypeScript, SQL

Frontend: React.js, Next.js, Three.js, TailwindCSS, HTML5, CSS3

Backend: Node.js, Express.js, REST APIs, Socket.io

Databases & Tools: MongoDB, MySQL, PostgreSQL, Git, GitHub, VS Code, Clerk, Cloudinary

Achievements

- Winner (1st Place) - Josh Software 24-Hour Hackathon (2026).
- Solved 250+ DSA problems across LeetCode and coding platforms.
- Secured 2 Gold Medals in the International Mathematics Olympiad (IMO).
- Secured Medal in the International Science Olympiad (ISO).
